

LOST ROUND 3

TOSS-UP

1) Physics – *Short Answer* If the range of a projectile fired at a 30 degree angle to the horizontal is 15 meters, what is the maximum possible range of a projectile fired with the same initial velocity in meters?

ANSWER: $10\sqrt{3}$

BONUS

1) Physics – *Short Answer* A wire with a radius of 6 mm is carrying a current with a uniform current density. What is the ratio of the magnetic field strength at a distance of 9 mm from the axis to that at a distance of 2 mm from the axis?

ANSWER: 2

TOSS-UP

2) Energy – *Multiple Choice* DOE Researchers at SLAC National Accelerator Lab combined cryogenic electron tomography and fluorescence imaging to produce a new convolutional technique to detect the cellular localization of proteins. They performed this method on a group of cells in metaphase for the localization of kinetochores. In which of the following locations would they find the largest amount of fluorescence?

- W) Centromeres of chromosomes
- X) Minus end of the spindle
- Y) Plasma membrane near connexins
- Z) Ribosomes bound to signal recognition particles

ANSWER: W) CENTROMERES OF CHROMOSOMES

BONUS

2) Energy – *Short Answer* Scientists at Lawrence Berkeley National Lab imaged the ORF8 protein, a component of many coronaviruses that is known to be involved in disease severity and immune evasion. Identify all of the following three statements concerning coronaviruses that are true: 1) They utilize reverse transcriptase in their active replicative cycle; 2) They utilize single stranded RNA as their genome; 3) They are responsible for causing SARS.

ANSWER: 2 AND 3

TOSS-UP

3) Chemistry – *Short Answer* Order the following three hydrogen emission series in increasing frequency of their alpha lines: 1) Paschen; 2) Lyman; 3) Balmer.

ANSWER: 1, 3, 2

BONUS

3) Chemistry – *Short Answer* Identify all of the following three organic molecules that are chiral: 1) 3-methyl 1-hexyne [*three methyl one hex eye-n*]; 2) 1,2-dimethyl allene [*All-ee-n*]; 3) 2-methyl pentane [*two methyl pent-ay-n*] [*read all names slowly*].

ANSWER: 1 AND 2

TOSS-UP

4) Biology - *Multiple Choice* Which of the following terms best characterizes a plant species where the female and male organs are located on distinct flowers?

- W) Dioecious [*dahy-ee-schuhs*]
- X) Homosporous
- Y) Monocious [*mon-ee-schuhs*]
- Z) Heterosporous

ANSWER: W) DIOECIOUS

BONUS

4) Biology – *Short Answer* Which of the following 3 plant hormones is incorrectly matched with their function: 1) Gibberellins - increases stem elongation; 2) Auxins - participates in thigmotropism 3) Cytokinins - decreases cell division

ANSWER: 3 ONLY

TOSS-UP

5) Math – *Short Answer* How many ways are there to paint the faces of a cube either red or green if rotations of one coloring are not considered distinct?

ANSWER: 10

BONUS

5) Math – *Short Answer* Two trains are travelling towards each other on straight, parallel tracks. One train travels at a constant speed of 10 miles per hour. The other train's speed at time t is $10t$ miles per hour. If they are 120 miles apart from each other at time $t = 0$, at what time t will they meet?

ANSWER: 4

TOSS-UP

6) Earth and Space – *Short Answer* Balmer lines are strongest in which spectral class of star?

ANSWER: A

BONUS

6) Earth and Space – *Multiple Choice* Yardangs can be observed on Mars. Which of the following best describes a yardang?

- W) An isolated patch of land surrounded by a pool of lava
- X) More mechanically resistant rock protruding out of the sand
- Y) An old volcanic neck with eroded surrounding rocks
- Z) Fossilized coral reef

ANSWER: X) MORE MECHANICALLY RESISTANT ROCK PROTRUDING OUT OF THE SAND

TOSS-UP

7) Physics – *Short Answer* Identify all of the following three objects with uniform density that have an isotropic drag coefficient: 1) Cube; 2) Sphere; 3) Cone.

ANSWER: 2 ONLY

BONUS

7) Physics – *Short Answer* What quantity is the canonically conjugate operator for the energy of a state in quantum mechanics?

ANSWER: TIME

TOSS-UP

8) Energy – *Multiple Choice* Scientists at Brookhaven's Center for Functional Nanomaterials used spectroscopic methods to study a platinum and cerium oxide catalyst used in the water-gas shift reaction. Which of the following is a unique challenge in designing catalysts for the water-gas shift reaction?

- W) Oxygen vacancies in the catalyst
- X) Poisoning of the catalyst
- Y) Reduction of the catalyst
- Z) Large surface area of the catalyst

ANSWER: X) POISONING OF THE CATALYST

BONUS

8) Energy – *Multiple Choice* Chemists at Pacific Northwest National Lab designed a battery with an aqueous electrolyte as well as zinc and graphite electrodes that has an operating potential between 2.3 and 2.5 volts. Which of the following explains why the aqueous electrolyte has an extremely high concentration of salt ions?

- W) To prevent the aqueous electrolyte from being oxidized
- X) To prevent the aqueous electrolyte from being reduced
- Y) To prevent the intercalation of the graphite electrode
- Z) To prevent the corrosion of the zinc electrode

ANSWER: W) TO PREVENT THE AQUEOUS ELECTROLYTE FROM BEING OXIDIZED

TOSS-UP

9) Chemistry – *Multiple Choice* When oxygen-17 undergoes alpha decay followed by single neutron capture, which of the following isotopes is formed?

- W) Carbon-12
- X) Carbon-14
- Y) Nitrogen-12
- Z) Nitrogen-14

ANSWER: X) CARBON-14

BONUS

9) Chemistry – *Short Answer* Identify all of the following three statements that are true about surface catalysis for the addition of gaseous hydrogen to an alkene to produce an alkane: 1) Cleavage of the hydrogen hydrogen bond occurs in the unbounded gas phase; 2) The rate determining step is desorption; 3) Increasing the surface area of the catalyst would increase the rate of the reaction.

ANSWER: 3 ONLY

TOSS-UP

10) Biology – *Short Answer* When analyzing the amniotic egg of a new bird species, you would find the largest concentration of uric acid in which extraembryonic membrane?

ANSWER: ALLANTOIS

BONUS

10) Biology – *Short Answer* Identify all of the following three groups of animals that possess amniotic eggs: 1) Frogs; 2) Salamanders; 3) Apes.

ANSWER: 3 ONLY

TOSS-UP

11) Math – *Short Answer* A rhombus with side length 1 has an inscribed circle with radius $\frac{1}{3}$. What is the area of the rhombus?

ANSWER: $\frac{2}{3}$

BONUS

11) Math – *Short Answer* The side lengths of a triangle are 13, 14, and 15. What is the sine of the largest angle in this triangle?

ANSWER: $\frac{12}{13}$

TOSS-UP

12) Earth and Space – *Short Answer* Order the following 3 headland features in order from MOST to LEAST eroded: 1) Sea arch; 2) Sea stack; 3) Sea stump.

ANSWER: 3 2 1

BONUS

12) Earth and Space – *Short Answer* Give, by name or number, all of the following 3 statements concerning beaches which are true: 1) A baymouth bar connects an island to the mainland; 2) The water inside an atoll is called a lagoon; 3) Spits are a result of longshore transport

ANSWER: 2 AND 3

TOSS-UP

13) Physics – *Multiple Choice* Water is flowing through a pipe with constant velocity and pressure. Which of the following statements must be true about the pipe?

- W) The pipe is sloped upward
- X) The pipe is sloped downward
- Y) The pipe is horizontal
- Z) The pipe is vertical

ANSWER: Y) THE PIPE IS HORIZONTAL

BONUS

13) Physics – *Short Answer* An electron moves at 4 meters per second in a 2 tesla magnetic field. If the mass and charge of an electron are $9 \cdot 10^{-31}$ kilograms [*nine times ten to the negative thirty one*] and $1.6 \cdot 10^{-19}$ coulombs [*one times ten to the negative nineteen*] respectively, what is the radius of the electron's circular orbit in picometers and to two significant figures?

ANSWER: 11

TOSS-UP

14) Energy – *Multiple Choice* Scientists at Argonne National Lab have been studying the anti-inflammatory effects of inosine when injected into monocytes. In which of the following molecules is inosine most likely to be found?

- W) ssRNA
- X) tRNA
- Y) miRNA
- Z) cDNA

ANSWER: X) tRNA

BONUS

14) Energy – *Short Answer* Scientists at Lawrence Berkeley National Lab have been using helioseismology models of the sun to determine its differential rotation. Earlier models failed to take into account the twisting and tangling of magnetic fields in the sun. What model describes these interactions of the solar magnetic fields?

ANSWER: BABCOCK MODEL

TOSS-UP

15) Chemistry – *Multiple Choice* Which of the following molecules has the greatest bond angle?

- W) NH_3
- X) NF_3
- Y) H_2O
- Z) H_2S

ANSWER: W) NH_3

BONUS

15) Chemistry – *Short Answer* Metals A and B form slightly soluble chlorides ACl and BCl with solubility products of 4×10^{-5} and 6×10^{-5} , respectively. One gram of each chloride's powder is simultaneously added to the same solution to create a saturated solution. To the nearest hundredth, what is the molarity of chloride ions in the solution at equilibrium?

ANSWER: 0.01

TOSS-UP

16) Biology – *Short Answer* IPSPs may be triggered by the binding of GABA because GABA receptors increase the permeability of the membrane for what ion?

ANSWER: Cl^- (DO NOT ACCEPT: CHLORINE)

BONUS

16) Biology – *Short Answer* Identify all of the following three statements that are true of the lac operon in prokaryotes when both glucose and lactose are abundant: 1) CAP is activated; 2) RNA Polymerase is more likely to bind to the operator than without glucose; 3) The lac repressor is bound to the operator.

ANSWER: NONE

TOSS-UP

17) Math – *Short Answer* A curve is defined parametrically by the equation $x = 6t^2 - 1$ and $y = 3t$. What is the slope of the line tangent to the curve at the point (23, 6)?

ANSWER: 1/8

BONUS

17) Math – *Short Answer* An infinite geometric series has second term $\frac{1}{2}$ and fourth term $\frac{1}{4}$. What is the sum of this series?

ANSWER: $1 + \sqrt{2}$

TOSS-UP

18) Earth and Space – *Multiple Choice* Hawaiian volcanoes are formed from a hotspot and erupt constantly. Which of the following types of lava do you expect to find in Hawaii?

- W) Rhyolitic
- X) Andesitic
- Y) Basaltic
- Z) Komatiitic

ANSWER: Y) BASALTIC

BONUS

18) Earth and Space – *Short Answer* What Hawaiian name is given to the jet black crystallized lava drops which crystallize while in the air?

ANSWER: PELE'S TEARS

TOSS-UP

19) Physics – *Multiple Choice* An electron is moving north at constant velocity when it enters a magnetic field pointing straight up. In what direction is the electron immediately accelerated?

- W) West
- X) East
- Y) Up
- Z) Down

ANSWER: W) WEST

BONUS

19) Physics – *Short Answer* Alex is launching an amateur rocket from his backyard with a mass of 200 kg. The rocket consumes fuel at 0.5 kg/s and has an exhaust gas with relative speed of 1500 m/s. What is the initial upward acceleration of the toy rocket from Alex's backyard?

ANSWER: 0

TOSS-UP

20) Energy – *Short Answer* Researchers at Georgia State University used a supercomputer at Oak Ridge National Lab to develop an integrated model of the transcription preinitiation complex. What is the most common eukaryotic DNA promoter element over which the preinitiation complex forms?

ANSWER: TATA BOX

BONUS

20) Energy – *Short Answer* Scientists at FermiLab discovered a new type of particle in the nucleus called a hyperon, which is made up of two strange quarks and one down quark. Identify all of the following three statements that are true about the hyperon: 1) It is a baryon; 2) It is positively charged; 3) It has a shorter lifetime than a free neutron.

ANSWER: 1 AND 3

TOSS-UP

21) Chemistry – *Short Answer* When a 1 molar aqueous solution of hydrofluoric acid is electrolyzed, what gas is produced at the anode?

ANSWER: OXYGEN (ACCEPT: O₂)

BONUS

21) Chemistry – *Short Answer* Order the following three aqueous solutions in increasing boiling point: 1) 0.1 molal hydrochloric acid; 2) Pure water; 3) 0.1 molal ethanol.

ANSWER: 3, 2, 1

TOSS-UP

22) Biology – *Short Answer* During the signaling pathway for apoptosis, what iron based protein released from the mitochondria activates the caspase Ced-9?

ANSWER: CYTOCHROME C

BONUS

22) Biology – *Short Answer* Nitrogenase is an enzyme requiring high inputs of energy to fix nitrogen. Identify all of the following three statements are likely true about nitrogenase: 1) It requires metal cofactors to function; 2) It is found in rhizobia; 3) It is found in cyanobacteria.

ANSWER: ALL

TOSS-UP

23) Math – *Multiple Choice* Which of the following functions contains no critical points?

W) $f(x) = x^3 + x$

X) $f(x) = \ln(x^2)$

Y) $f(x) = |x|$

Z) $f(x) = \sqrt[3]{x}$

ANSWER: W) $f(x) = x^3 + x$

BONUS

23) Math – *Short Answer* A, B, and C are three points located on the perimeter of a circle. If major arc ABC measures 144° and major arc BCA measures 256° , what is the degree measure of major arc CAB?

ANSWER: 320°

TOSS-UP

24) Earth and Space – *Multiple Choice* In what quadrant of the Hertzsprung russell diagram would one expect to find a white dwarf?

W) Top left

X) Top right

Y) Bottom left

Z) Bottom right

ANSWER: Y) BOTTOM LEFT

BONUS

24) Earth and Space – *Short Answer* Order the following three layers of the sun from innermost to outermost: 1) Radiative Zone; 2) Photosphere; 3) Convective Zone

ANSWER: 1, 3, 2

TOSS-UP

25) Physics – *Multiple Choice* What is the coefficient of restitution of a completely inelastic collision?

- W) -1
- X) 0
- Y) 0.5
- Z) 1

ANSWER: X) 0

BONUS

25) Physics – *Short Answer* Identify all of the following three wavelengths in meters that are resonant frequencies for a pipe open on one end and closed on the other with a length of 6 meters: 1) 4; 2) 8; 3) 16.

ANSWER: 2 ONLY
